9/11 Attacks

On September 11, 2001 two airplanes crashed into the Twin Towers, another airplane crashed into the Pentagon, and a fourth airplane crashed in a field in Pennsylvania. Nearly 3,000 people died. It was a very sad way to die. In the Twin Towers, the stairwells were filled with fire and smoke. Some people died because they tried to escape by using the elevators. Many people died by jumping out of the windows because of the heat.
