

Social Issues Brochure Production via Microsoft Publisher

8th Grade, Raul Yzaguirre School for Success, Houston, Texas, U.S.A. [2010-2011]

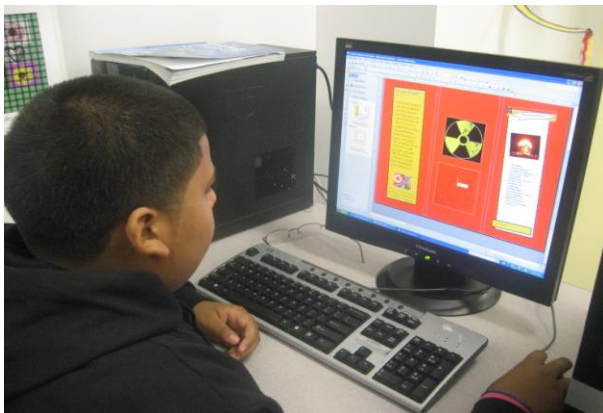

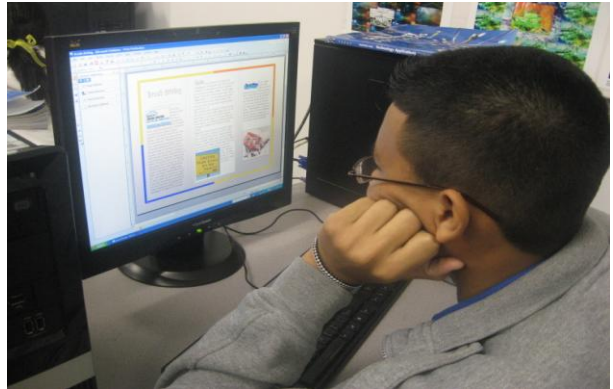

The students were tasked to confront social issues by researching their various topics online for greater awareness/understanding then using the information along with paraphrasing and pictures downloaded from the Internet to hone their skills in Microsoft Publisher to produce two-fold brochures to "advertise" ... similar to PSAs [public service announcements] ... their topics.

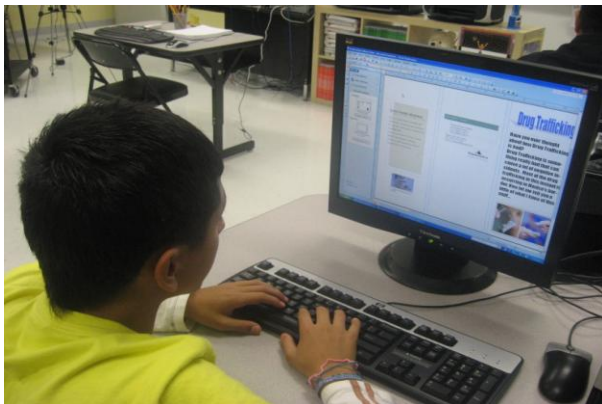

The duality of the project placed the students in a situation to focus on issues they may address later in life in academia and at the workplace, and produce products ... brochures ... via publishing software to hone their skills in this respect and as they apply to this vocation. The students were also asked to present their brochures through projection and discussion so there would be a crossover for all social issues per class for greater awareness/understanding as well as public speaking practice per student. [Note: the photos/images were downloaded from the Internet strictly for educational purposes.].
